

More automation anywhere

Recently, AI is getting more and more evolved and we have experienced using a lot of tools such as Chat GPT, GitHub Copilot, Bard, Bing, Microsoft Copilot, and Duet.

Using these tools is very important for us to know and catch recent trends and to use our work to increase productivity and efficiency. Previously, coding was created by only people who understood and experienced well about coding and tech. To be an experienced and professional, it took time to get there with time, cost, and effort. By coming out with these tools, people who are beginning tech or non tech can have opportunities to receive the support and help coding and programming. Those technologies already existed previously but the accuracy was not enough for common people to use on a daily basis. The evolution of cloud computing provides much faster and deep computation that improves the accuracy and then it is in our use now.

This is a great opportunity for us to go into more techs and coding. However, we should know that it is easy to get information that means it is harder to get what we want because not just you but a lot of people are like that. We should remember that we understand the coding well and create the code from our brain, not just directly using these convenient tools. Tools are just supporting our education, but we cannot use it for our real work. We need to understand how the tools work, the contents, and the coding. Tools just provide us to get familiar with tech and coding. But the most important thing is what we learn from them and how we can use it using the tools and the experience.
